May 2, 2014

Dear Property Owner,

The Town of Avon is continuing to work on a study to determine sources of Infiltration (from ground water) and Inflow (from rainwater) into the Town's sewer collection system. The project began by installing temporary flow meters in select manholes around town. The next step involves further refining the information we are receiving by conducting testing at other manholes within the sewer system. Several of the manholes that will be used are located within private property. The Town has legal access rights to these manholes via easements.

You are being notified via this letter that your property either has a manhole of interest or provides access to a manhole of interest for the study. What that means to you is that Town and consultant staff may be on your property to locate the manhole, to perform clearing around the manhole to make it accessible, and then to conduct whatever flow monitoring or testing may be required. We anticipate minimal if any physical disturbance to your property (other than clearing within the easement), and will at all times respect you and your property. All personnel working on the project will carry appropriate identification and will respectfully provide it for your inspection upon request.

Monitoring of the meters and testing will occur at random times during the next 8 weeks depending in large part on rain events during the period. We will be providing information at news-worthy times throughout the project under the Engineering page of the Town of Avon Website.

If you have any questions, comments or concerns regarding this, please do not hesitate to contact Mr. Timothy Foster, Superintendent of Sewers by phone at 860.409.4324 or by email at tfoster@town.avon.ct.us or myself by phone at 860.409.4378 or by email at lbaril@town.avon.ct.us.

We would like to thank you in advance for your anticipated cooperation during this important project.

Sincerely,

Lawrence E. Baril, P.E., GISP
Town Engineer

Timothy Foster
Superintendent of Sewers
